

Dear Sir

I am just in receipt of your
note of Sept. 24, having just returned from
the west. The package to which you re-
fer has not as yet come to hand, but is stopped
in New York, in the U.S. Custom House - As
soon as it comes I will have it sent to you -

Very truly yours
J. A. Allen

Mus. Comp. Zoölogy,
Oct. 14, '73 -

N. longifolia — Lvs. broadish at base, oblongly truncate or cordate — without glands. (Least lvs. green?)
over an elliptic. All lvs ^{more} undulate in our species than the
foreign, the lower larger, and the ~~stems~~ ^{stems} more strongly recurved. —

N. Patinaria — Lvs. broadish above the base, sub-
attenuate or subcordate — more or less gland-
bearing. (Achenium perhaps rather narrower
in proportion than that of *N. longifolia*.) —

S.W. — July 1874.
